# **TEST REPORT**

Report No. : AN0000470(0) Date : 2011-01-04

Application No. : LM014880(0)

Applicant : Portable Innovation Technology Limited

Unit 601-602, 6/F Park Building,

476 Castle Peak Road, Cheung Sha Wan,

Kowloon, Hong Kong

Sample Description : One(1) item of submitted sample stated to be <u>PT20 Mobile Barcode Terminal</u>

of Model No. PT20

Radio Frequency : 2402MHz ~ 2480MHz Bluetooth Transceiver

: 2412MHz ~ 2472MHz Wi-Fi Transceiver

Rating : 1 x 3.7V rechargeable battery

AC 100V ~ 240V to DC 5.5V adaptor

No. of submitted sample: Three (3) set (s)

Date Received : 2010-08-27.

Test Period : 2010-08-30 to 2010-12-29.

Test Requested : FCC Part 15 Certification.

Test Method : 47 CFR Part 15 (10-1-09 Edition)

ANSI C63.4 - 2003

Test Result : See attached sheet(s) from page 2 to 32.

Conclusion : The submitted sample was found to comply with requirement of FCC Part 15

Subpart B and C.

Remark : The sample contains Cino SE380 scanner module or HHP 5X00 Series scanner

module. HHP 5100 scanner module was chosen to be the representative of HHP 5X00 Series. Both scanner modules were tested in barcode scanning mode.

#### 1 General Information

# 1.1 General Description

The equipment under test (EUT) is a PT20 Mobile Barcode Terminal. The EUT is powered by 1 x 3.7V rechargeable battery. The operation system of the EUT is WinCE and built-in SDRAM, NAND Flash Memory, Barcode scanner, Bluetooth and Wi-Fi features.

The brief circuit description is saved with filename: OpDes.pdf

Page 3 of 32

#### 1.2 Location of the test site

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003. A Semi-Anechoic Chamber Testing Site is set up for investigation and located at:

Ground Floor, Yan Hing Centre, 9 – 13 Wong Chuk Yeung Street, Fo Tan, Shatin, New Territories, Hong Kong.

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. A shielded room is located at :

Ground Floor, Yan Hing Centre, 9 – 13 Wong Chuk Yeung Street, Fo Tan, Shatin, New Territories, Hong Kong.

# 1.5 Measurement Uncertainty

The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k=2, providing a level of confidence of approximately 95%.

#### Radiated emissions

| Tudiated Clinishons          |                                 |
|------------------------------|---------------------------------|
| Frequency                    | Uncertainty (U <sub>lab</sub> ) |
| 30MHz ~ 200MHz (Horizontal)  | 4.63dB                          |
| 30MHz ~ 200MHz (Vertical)    | 4.64dB                          |
| 200MHz ~1000MHz (Horizontal) | 4.65dB                          |
| 200MHz ~1000MHz (Vertical)   | 4.64dB                          |

#### Conducted emissions

| Frequency      | Uncertainty (U <sub>lab</sub> ) |
|----------------|---------------------------------|
| 150kHz ~ 30MHz | 3.04dB                          |

Page 6 of 32 FCC ID: UYA-PT20

#### 2 Description of the radiated emission test

#### 2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 - 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement for Radiated Emission measurement.

The antenna output terminal was connected to spectrum analyzer directly for conducted output power measurement.

Page 7 of 32

#### 2.2 Test Result

Subpart C:

Peak Detector and Average Detector data in radiated emission test was measured unless otherwise stated.

"#" means emissions appear within the restricted bands shall follow the requirement of section 15.205.

The harmonic emissions meet the requirement of section 15.209 are based on measurements employing the CISPR quasi-peak detector below 1000MHz and average detector for frequencies above 1000MHz.

The maximum peak conducted output power of Terminal J4 and Terminal J5 meet the requirement of section 15.247(b)(3) and below the limit. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements.

The fundamental and the harmonics were investigated, and emissions more 20dB below limit were not reported. Thus, those highest emissions were presented in next page (section 2.3 and 2.4).

It was found that the EUT meet the FCC requirement.

Subpart B:

The emissions meet the requirement of section 15.109 are based on measurements employing the CISPR quasi-peak detector below 1000MHz and average detector for frequencies above 1000MHz.

The frequencies from 30MHz to 1000MHz were investigated, and emissions more 20dB below limit were not reported. Thus, those highest emissions were presented in next page (section 2.3).

It was found that the EUT meet the FCC requirement.

# 3 Description of the Line-conducted Test

### 3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 - 2003. The EUT was setup as described in the procedures, and both lines were measured.

#### 3.2 Test Result

The EUT was tested under PC connected with data transfer situation with battery charging.

It was found that the EUT met the FCC requirement.

# 3.3 Graph and Table of Conducted Emission Measurement Data

For electronic filling, the document is saved with filename TestRpt2.pdf.

Page 27 of 32

- 4 Photograph
- 4.1 Photographs of the Test Setup for Radiated Emission and Conducted Emission

For electronic filing, the photos are saved with filename TSup1.jpg to TSup7.jpg.

4.2 Photographs of the External and Internal Configurations of the EUT

For electronic filing, the photos are saved with filename ExPho1.jpg to ExPho8.jpg and InPho1.jpg to InPho12.jpg.

Page 28 of 32 FCC ID: UYA-PT20

#### 5 Supplementary document

The following document were submitted by applicant, and for electronic filing, the document are saved with the following filenames:

| Document                | Filename     |
|-------------------------|--------------|
| ID Label/Location       | LabelSmp.jpg |
| Block Diagram           | BlkDia.pdf   |
| Schematic Diagram       | Schem.pdf    |
| Users Manual            | UserMan.pdf  |
| Operational Description | OpDes.pdf    |

#### 5.1 Bandwidth

Bluetooth:

The plot saved in TestRpt3.pdf shows the channel spacing has minimum 25 kHz.

The plot saved in TestRpt4.pdf shows the frequency hopping channel over 75 hopping frequency.

The plot saved in TestRpt5.pdf shows the fundamental emission is confined in the specified band. It shows the 20dB bandwidth and band edge meet the 15.247(d) and 15.205 requirement for frequency band 2400 MHz to 2483.5 MHz.

Wi-Fi 802.11b/g:

The plot saved in TestRpt7.pdf shows the 6dB bandwidth has minimum 500 kHz for frequency band 2400 MHz to 2483.5 MHz. it fulfils the section 15.247(a)(2) requirement.

The plot saved in TestRpt8.pdf shows the fundamental emission is confined in the specified band. It shows that the band edge meet the 15.247(d) and 15.205 requirement at 2400 MHz and 2483.5 MHz.

### 5.2 Duty cycle

Not Applicable

#### **5.3** Transmission time

Not Applicable

Page 29 of 32

# 5.4 Power Spectral Density

The plot saved in TestRpt9.pdf shows the frequency channel 2412 MHz, 2437 MHz and 2462 MHz were not excess 8dBm for 3 kHz bandwidth. It fulfils 15.247(e) requirement.

# **TEST REPORT**

Report No. : AN0000470(0) Date : 2011-01-04

# 5.5 Average on time

The plot saved in TestRpt6.pdf shows the average on time for frequency hopping channel is within 0.4 seconds.

The calculation for average on time as below:

Average hopping channel = Number of transmitted carrier / Sweep time

Average on time = Packet on time x Average hopping channel

Dwell time = Average on time x Total frequency hopping channel x 0.4

Test result:

| Frequency<br>Channel<br>(MHz) | Packet | Dwell Time<br>(Seconds) | Limit<br>(Seconds) | Margin<br>(Seconds) |
|-------------------------------|--------|-------------------------|--------------------|---------------------|
| 2402                          | DH1    | 0.125                   | 0.4                | -0.275              |
| 2402                          | DH3    | 0.262                   | 0.4                | -0.138              |
